EDUCATION

Gettysburg College

May 2026

B.S. in Computer Science and Mathematics | Rank: 7/547 | *Summa Cum Laude*

GPA: 4.08

- Honors: Phi Beta Kappa, Honors in Mathematics, Earl E. Ziegler Mathematics Award, Pi Mu Epsilon
- Relevant Coursework: Data Structures and Algorithms, Principles of Database Systems, Advanced Systems Design, Introduction to Artificial Intelligence, AI in Games, Data Science Programming, The Theory of Computation

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, Java, Elixir, Go

Frontend & Backend: React, Next.js, Django, Phoenix LiveView, HTML/CSS, REST APIs

Relational Databases: PostgreSQL, MySQL, Supabase, pgvector, SQL

AI/ML: LLMs, RAG, Prompt Engineering, LLM-as-a-judge Evals, LangGraph, LlamaIndex, Pydantic, AWS Bedrock

Tools & Cloud: Git, Docker, AWS, Jenkins, GitHub Actions, CI/CD, Stripe API, Vercel, Fly.io, Claude Code

EXPERIENCE

Software Engineer

Aug. 2026 – Present

Johnson & Johnson

Raritan, NJ

- Architected an end-to-end **Databricks** pipeline (Oracle to curated Delta tables to S3) powering an AI complaint scoring system for **30,000+** complaints annually, deployed via **Jenkins CI/CD** across dev/qa/prod.
- Engineered an **LLM** scoring orchestration layer with batch processing, prompt caching, and checkpointing, cutting compute costs **50%** and saving SMEs weeks of manual review annually.
- Extended a shared **Python** AWS Bedrock AgentCore runtime with configurable model selection across the full request chain, giving a **55-member** team room to experiment with new AI tooling.
- Cut processing costs **70%** and hardened prompts against injection by enforcing explicit **JSON output contracts** and streamlining orchestration routing across LLM scoring modules.

Software Development Intern

Jun. 2026 – Jul. 2026

Re:Members

Remote

- Engineered member-portal features in **Elixir/Phoenix LiveView** and **Ecto/PostgreSQL**, including database-scoped email-template access control, serving about **80,000 members** across **45+ organizations**.
- To safeguard a **\$500K** client renewal, diagnosed and fixed a **Stripe SetupIntent** state-sync bug in Phoenix LiveView Checkout, eliminating a false “payment blocked” state.
- Authored **80+** ExUnit/LiveViewTest regression tests via test-driven development, enforced in a containerized **GitHub Actions** CI/CD pipeline with ExCoveralls coverage tracking.
- Eliminated a critical member-facing form crash spanning **3 exception types** by replacing fragile direct struct access with a polymorphic Elixir behaviour-callback dispatch pattern.

AI Engineer Intern

Jun. 2025 – Aug. 2025

KPMG

Berlin, DE

- Architected a vector-graph **RAG** pipeline (LangGraph, Neo4j) with CoT prompting and Instructor-structured outputs, generating **500+** judge-validated QA pairs for an audit-expert LLM and saving **50+ hours**.
- Built a **GPT-4o** vision parser with PyMuPDF rendering and exponential-backoff retries for **600+** audit manual pages, eliminating **10 hrs/week** of manual correction.
- Cut inference cost **17x** by routing bulk generation to GPT-4o-mini with **Pydantic**-validated outputs.

SELECTED PROJECTS

Vendora | Next.js, React, TypeScript, PostgreSQL, Stripe Connect | Live Site

Jul. 2026 – Present

- Shipped a production marketplace in **5.5 weeks** with a 2-person team, pair-programming with **Claude Code** across implementation, review, and tests (**461 commits**, 165 PRs) in Next.js, React, and TypeScript.
- Processed **\$2,000+** in real vendor payouts across 11 transactions by building a **Stripe Connect** pipeline from scratch (onboarding, Checkout, webhooks, transfers, refunds).
- Onboarded **28 live accounts** via a self-serve Supabase Auth flow, converting 22 applications into paid booth assignments with zero data-integrity incidents.
- Secured all **19** production **PostgreSQL** tables with Row-Level Security across 62 migrations, validated by a **1,524-test** Vitest suite run as a CI merge gate.

APPC Archive Assistant | RAG, Django, React, pgvector, Python

Jan. 2026 – May 2026

- Built a self-querying **RAG** system with 2 teammates giving faculty natural-language access to **500+ PDFs** via LlamaIndex, Pydantic, and **pgvector** with adaptive course/date filtering.
- Architected a fault-tolerant service with a 4-model OpenRouter fallback chain, reaching **99.9%** uptime and **<2s** latency, and cut inference costs **90%** with multi-model prompting.
